

Vlad Osmianski

Full-stack Web developer

A senior PHP + JavaScript + MySQL developer of large-scale websites & backends and entrepreneur living in Vilnius, Lithuania with my wife Monika and a parrot Johnny.

Very good at project management and communication, too.

I'm here to create stuff that is useful to other people. Let's keep in touch!

WORK EXPERIENCE

CEO, Lead Developer & Owner | Softnova

March 2008 - Present

Highlighted project. I developed many SEO and filtering-related extensions for Magento 1.x and 2.x, manadev.com:

- Thousands of customers located in more than 100 countries all over the world.
- Extensive SEO options, AJAX refresh, speed optimization, beautifully crafted layered navigation templates (sliders, checkboxes, and more), removing fundamental Magento limitations.
- Professional marketing website, documentation, support and licensing system. Getting my hands dirty solving compatibility issues with good and bad code of other extension providers.

Tech stack: PHP, JavaScript, MySQL, ElasticSearch, Gulp, WebPack, C#.

Side project. I created [Osm Framework \(docs\)](#) - an open-source, insanely fast, unprecedentedly extensible, and fun to work with PHP 8 framework for creating modern Web applications:

- **Highlighted feature** - [PHP dynamic traits](#). It allows to inject your code in the beginning, in the end, or instead of any existing method. Even more, you can add new properties and methods to any existing class.
- I've been [building it in public](#), and it helped me to become more consistent, to write clear and precise documentation, to write unit tests and to run them automatically on GitHub, to deploy on Push.

Project Manager | Sonex Sistemios

March 2004 - March 2008

Highlighted project. On the vendor side, I led an ERP implementation project in a large pharmacy chain spread over 6 countries. My role was management of the implementation process, search and procurement of local partners in other countries, team management, customer relations. It was the largest project implemented by our agency, and it was delivered within agreed time/budget constraints.

Developer | Intelsoftas

June 2000 - February 2004

Transport & logistics backend software built with Lotus Notes.

Developer | Compidea

September 1997 - October 1999

Highlighted project. In my early days, I created a POS server that handles operations of up to 8 POS/cash register systems. Today, it's hardly impressive, but back then, it was critical piece of every day operation in many stores. And it's initial version was written in a weekend!

EXPERT SKILLS

Backend. PHP, Laravel, Symfony, in-house framework.

Frontend. JavaScript, Vue, Inertia, jQuery, CSS, Tailwind CSS.

Databases. MySQL, SQLite, SQL Server, Redis, ElasticSearch.

Servers. Linux, Ansible, Bash, Laravel Forge.

Soft skills. Project management, effective communication, team management.

Previous stacks. Magento, .NET, C#, Visual Basic, Lotus Notes, C++.
